Annotation Instructions for Images (Cats, Dogs, Birds)

Task Description:
- In this annotation task, you will be labeling and annotating images containing cats, dogs, and birds.

Labeling Guidelines:
- You will use bounding boxes to label objects in the images.
- Each bounding box should enclose one and only one object (cat, dog, or bird).

Label Categories:
1. Cat
2. Dog
3. Bird

Annotation Steps:
1. Open the image provided.
2. Identify any cats, dogs, or birds in the image.
3. Draw a bounding box around each cat, dog, or bird using the annotation tool.
4. Label each bounding box with the appropriate category (Cat, Dog, or Bird).
5. If there are no cats, dogs, or birds in the image, mark it as "No Object."

Annotation Tips:
- Ensure that the bounding boxes are tightly drawn around the object without including unnecessary background.
- Avoid overlapping bounding boxes for different objects.
- If an object is partially visible, draw the bounding box around the visible part.
- If you are unsure about an object, please use your best judgment, and if it's not clear, mark it as "No Object."

Quality Control:
- We maintain high-quality standards, so your annotations will be reviewed.
- Annotations should be accurate, with correctly labeled objects and bounding boxes.
- Consistency in labeling style is important.

Review and Submission:
- Once you have completed annotating the image, review your work to ensure accuracy.
- Save your annotations and submit the annotated images.

Thank you for your contribution!
